

Public App Approval Details - iChoose Kidney

Application Information

Application Name: iChoose Kidney

Application Owner: Rachel Patzer (RPATZER)

Application Technical Contact: Michael Patzer (MICHAELPATZER)

Application Description: The iCHOOSE mobile application and corresponding website is expected to serve as a decision support tool for nephrologists, primary care physicians, social workers, nurses, and/or patient educators to use with ESRD patients to help improve informed decision making for kidney failure treatment options. Risk prediction models for mortality on dialysis of kidney transplantation are presented.

July 2018 update: The updated iChoose Kidney now includes mortality and survival risk models based on United States Renal Data System data from 2005 through 2015. Dialysis modality and additional categories for time on dialysis have been added as predictive factors for the new version of the app.

Current Issues

Issue Log

A version of this app was published prior to the collection of review artifacts, and while the app was reviewed, these records are unavailable. App owners requested an update to the app 2018.04.26. The update was minor (changing a coefficient to a calculation within the app) and intended to bring the app into alignment with current medical standards; however, the time seemed appropriate to run the app through review to ensure compliance with any policies that have been updated since its development in 2014.

2018 (June-July) an update to this app passed a review since there were few changes from the original.

Reapproval Conditions

Internal Review Status: complete or incomplete
