Welcome to Confluence

The web application you are using right now is called Confluence. Confluence is an example of a *wiki*, a kind of web application designed to encourage easy editing, documentation, and collaboration. Wiki means "fast" in Hawaiian.

There are many different wiki applications for different purposes. For example, [Wikipedia](#) uses the MediaWiki software, which is designed to allow completely public editing. In contrast, Confluence is set up for corporate use. It is simple, easy to use, and allows fine-grained access control.
