

HIPAA Audit Logging Service and SIEM Integration Project

Background

The Security Information Event Management System (SIEM) should receive all HIPAA audit log messages created in the HIPAA Audit Logging Service. In FY 2014 the IT Architecture group developed and demonstrated this integration to the Information Security group. Now these groups must work together to deploy, test, refine, and promote the integration to production.

Goals

Deploy, test, and roll out the SIEM connector to production.

Project Phases

1. Testing (November)
2. Service Rollout (December)

We are scheduling work sessions with Derek Spransy and the integration team for October and November. The integration is anticipated to complete in December 2015.

Issues

There are no known issues at this time.
